

#### 1. DatabaseManager

Handles the setup and execution of MySQL queries.

Attributes:

conn: sql::Connection\* – Manages the MySQL database connection.

Methods:

DatabaseManager() – Constructor to initialize the database manager.

~DatabaseManager() – Destructor to close the connection.

connect() – Connects to the EECS MySQL database using student credentials.

executeQuery(query: const std::string&) – Sends a query string to the server and processes the result.

## 2. SQLQueries

Inherits from DatabaseManager. Defines methods for executing each assignment query.

Methods:

retrieveISStudents() – Query 1

findEnrolledInMoreThanTwo() – Query 2

listPhysicsProfessorsOverFiveYears() – Query 3

retrieveLargeDepartments() – Query 4

findDataCoursesByDrJohnson() – Query 5

displayNotEnrolledPastSemesters() – Query 6

retrieveSecondHighestGPA() – Query 7

findTAsWithHighGPA() – Query 8

listStudentsEnrolledAfter2022() – Query 9

topThreeProfessorsBySalary() – Query 10

insertAliceSmith() – Query 11

updateBobNorbertAddress() – Query 12
